Textile waterproofing

Properties

TEXTILE WATERPROOFING is a treatment product that makes all types of textiles hydrophobic, thereby making them waterproof and providing long-lasting protection against damage caused by water, humidity, and waterborne dirt (mould, stains, rings, etc.).

ADVANTAGES:
·Water-based product.
·Non-flammable.
·PFAS-free (fluoropolymer family considered 'forever chemicals' as they degrade very little in the environment and may build up in air, water, soil, and living organisms).
·Excellent hydrophobic effect.
·Easy to apply.
·Quick drying.

Instructions for use

Respect usual safety measures for the use of chemical products and wear the appropriate individual protection equipment.
TEXTILE WATERPROOFING is used undiluted on a clean, dry surface. For pre-cleaning, we recommend using our product **21 TEXTIL CLEANER.**
Spray a sufficient quantity of the product evenly over the surface to be treated, ensuring it is damp.
Leave to dry for a few hours at room temperature. The textile is then protected.

Technical specifications

Physical state: liquid **Colour:** yellowish **pH:** ca.3,5 **Density:** ca.0,99
Storage: keep tightly closed and protected from cold, frost, UV rays and heat in a ventilated place.

Environment: the surfactant(s) contained in this preparation complies(comply) with the biodegradability criteria as laid down in Regulation (EC) No.648/2004 on detergents.
