Bimini

Bridge shelter

Winter cover

Windshield cover

Sprayhood

Console cover and winch cover

Rear closure

Wheel cover

Sunbrella Plus

The ultimate resistance against the natural elements.

Sunbrella Plus fabric is made from exclusive high-tech fibres and, thanks to its high-resilience solution-dyed acrylic yarn, offers exceptional dimensional stability.

For even greater performance, the range features a new anti-fungal, waterproof and UV-resistant marine coating.

WHY
SUNBRELLA[®] ?

OUR
KNOW-HOW

MADE IN

FRANCE

RAW MATERIAL:

SOLUTION DYED ACRYLIC

Low Water Consumption

SOLUTION DYED

The colour pigments are added directly to liquid acrylic.

YARN DYED

The acrylic is prepared in a colourless dye bath.

PIECE DYED

The acrylic is prepared in a colourless dye bath.

EXTRUSION

The fibre is saturated with pigments for unrivalled UV resistance

The fibre is unbleached.

The fibre is unbleached.

SPINNING

The pigmented fibre is spun. The colour of the yarn is the same on the inside as the outside, similar to a carrot.

The unbleached fibre is spun and then the yarn is dyed. The colour only coats the outside of the yarn, similar to a radish.

The unbleached fibre is spun.

WEAVING

Fabric is woven with solution-dyed yarn for outstanding colour resistance to UV rays.

Colour resistance to UV rays is limited because the yarn is not dyed all the way through.

The unbleached yarn is woven and the fabric is then dyed. Colour resistance to UV rays is low because the fabric is only dyed on the surface.

SOLUTION DYED

YARN DYED

PIECE DYED

100% Sunbrella Acrylic

PIECE DYED

The fabric is piece-dyed after weaving.

YARN DIED

Yarn is dyed after spinning and before weaving.

SUNBRELLA SOLUTION DYED ACRYLIC

Color pigments are integrated into the core of the acrylic fiber even before the spinning stage.

Sunbrella® colors resist UV exposure and light.

Dimensional stability: high-tenacity yarn

RESISTANT TO ELONGATION

Certain fabrics have better dimensional stability, resisting deformation under tension better than others. The new Sunbrella Plus quality demonstrates a low percentage of elongation, and is **equal in the warp and weft**, which guarantees that the product will keep its initial shape.

Testing protocol carried out on new fabric, in the weft direction:

- Wet fabric samples measuring 5 cm in width and 30 cm in length (immersed in 25°C water for 24 hours)
- Suspension of a 25 kg weight from strips of fabric (simulation of fabric under tension).

Educational video High Tencity Yarn :

New Polyurethane coating

✦ Stability in case of temperature variations (the surface remains dry in hot, humid conditions, and flexible in very low temperatures, with no micro-cracking).

✦ Uniform appearance

Care & Cleaning

Rigorous maintenance of the boat and its textile parts is essential. This is all the more important as pollution is on the increase everywhere. The waterproof, fungus-resistant marine coating on Sunbrella Plus canvas must now meet environmental and ecological standards (Oeko Tex), and is therefore less aggressive than before against spores.

Added to this is the fact that the glazed parts on the closures are becoming increasingly important (thus reducing breathability), and the fact that yachting customers often neglect maintenance, particularly that of the textile parts, which should not be forgotten.

Care instructions must be followed to prevent mildew from developing on Sunbrella acrylic fabrics.
